

## Internship Process

- Step 1. Discuss your business needs with the CET Internship Supervisor.
- Step 2. Identify interesting candidates from their profiles.
- Step 3. Provide a work description for the internship period.
- Step 4. Complete an internship agreement form.
- Step 5. Fill out an evaluation sheet for the candidate at the end of the internship period.

## Becoming an Internship Host

VANIER COLLEGE

Computer Engineering  
Technology

## Computer Engineering Technology

In contrast to engineering students, our technologists have three full years of laboratory experience and can design PCBs, troubleshoot robotic systems, and act as network administrators. They act as a natural complement to engineering professionals because they are engineering professionals.

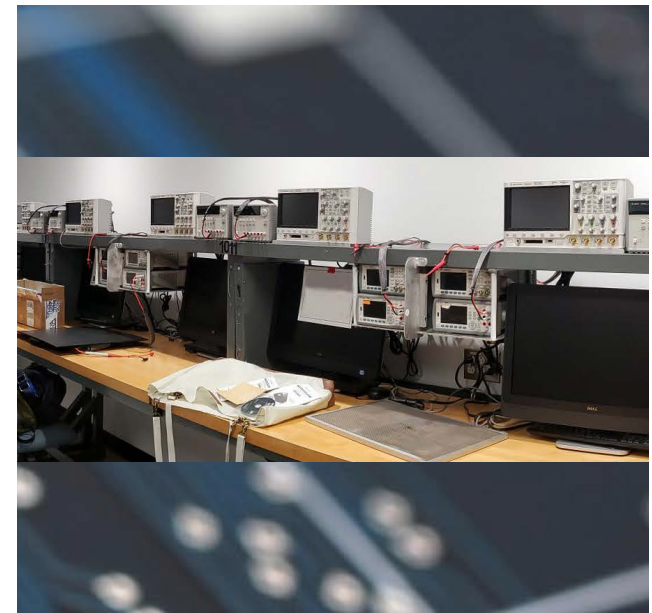

Challenging projects are key to the success of our program. In the past, students have designed, built and programmed: 3-axis CNC controllers, wireless robotic platforms and a machine vision tracking system.

## Why Host Students from our Internship Program?

The internship program offers employers and new technologists an opportunity to exchange knowledge in a way that is mutually beneficial. Because we are always updating our program, our technologists are versed on bleeding edge technology such as embedded machine vision, artificial intelligence & IoT sensing.

This unique and disruptive feature of our program has propelled many small companies into new products, and assisted more established ones into new technical directions.

## Becoming a Host Employer for a Student

Becoming a host is as simple as getting in contact with us. On first contact, we will discuss your business needs to see if our students are a good fit. On a follow-up we can provide you with individual profiles for you to review and select from. Upon written agreement, you will become a host employer.

The internship period is unpaid and takes place in the late spring for three weeks (April-May). Although it is not an obligation, many companies hire our interns right after the internship period.
